Usage instructions:

1. Follow all the configurations steps according to your needs.

2. Create your "Key Pair" and save the file for SSH entry to your server.

3. Launch your instance. Wait until the instance passes all the status checks.

4. Using your browser, go to the Mattermost GUI to complete your setup.

   - http://YourInstancePublic IPv4 address**:8065**
   - For ex: **http://356.326.21.23:8065**

Other Helpful Information:

For Resources: https://docs.mattermost.com/

   - If you need to restart Mattermost use the following commands:

     sudo systemctl restart mattermost

To update software, use:

   sudo apt update && sudo apt upgrade -y

Optional

Allocate Elastic IP

To ensure that your instance keeps its IP during restarts that might happen, configure an Elastic IP. From the EC2 console:

1. Select ELASTIC IPs.

2. Click on the ALLOCATE ELASTIC IP ADDRESS.

3. Select the default (Amazon pool of IPv4 addresses) and click on ALLOCATE.

4. From the ACTIONS pull down, select ASSOCIATE ELASTIC IP ADDRESS.

5. In the box that comes up, note down the Elastic IP Address, which will be needed when you configure your DNS.

6. In the search box under INSTANCE, click and find your INSTANCE ID and then click ASSOCIATE.

   Your instance now has an elastic IP associated with it.
